

Instructor	Dr. Amites Sarkar
Text	Probability and Statistical Inference (9 th ed.) Hogg and Tanis
Calculator	TI-86 or TI-89
Syllabus	See list of course objectives

Overview

Probability deals with uncertainty: uncertainty about the future, and sometimes the past and present too. Statistics deals with the collection and analysis of data. Given this, it may seem surprising that the foundation for modern statistics is probability theory. Part of the explanation lies in the fact that a set of data (e.g. on nutrition and life expectancy) is said to show a *statistically significant* effect if such an effect is **unlikely** to be the result of pure **chance**. Probability theory is required in order to make sense of the words “unlikely” and “chance” in the previous sentence.

This course is designed to help you learn intermediate college-level probability theory and statistical inference, and to develop your problem solving skills in the fields of probability and statistics.

Exams

Midterm 1	Friday 26 April
Midterm 2	Friday 24 May
Final	Wednesday 12 June 8–10 am

Grading

The two midterms are each worth 20%, and the final is worth 30%. In addition, there will be 6 30-minute quizzes, on 12 and 19 April and 3, 10, 17 and 31 May, and worth 5% each. If you feel too ill to take an exam, don't take it, but bring a doctor's certificate to me when you feel better and I will make arrangements.

Office hours

My office hours are 10–11 on Mondays, Tuesdays, Thursdays and Fridays, in 216 Bond Hall. My phone number is 650 7569 and my e-mail is amites.sarkar@wwu.edu

Relation to overall program goals

Among other things, this course will

- i) enhance your problem-solving skills;
- ii) help you recognize that a problem can have different useful representations (graphical, numerical, or symbolic);
- iii) increase your appreciation of the role of mathematics in the sciences and the real world.
